Welcome to AYE Fit Hub

Your 30-Day Transformation Begins

Day 1 of 30 | Strength & Foundations

Awet G. Nway

Mechanical Engineer & Fitness Coach

- 30-day program overview
- Body baseline measurements
- Foundation strength circuit

01 | Welcome to Your Journey

Congratulations on choosing to invest in yourself. AYE Fit Hub is a structured, science-backed 30-day fitness program designed for busy people who want real results — no gym required, no fancy equipment, just commitment and the right system.

Over the next 30 days you will train your body, fuel it properly, and build the mindset needed to sustain lifelong fitness. Each day delivers one focused lesson, one practical workout or habit, and one daily action you complete before moving on.

■ INFO — How to Use These PDFs

Read the lesson (10 min) → Complete the daily action → Do the workout → Log your results. Each PDF builds on the last. Do not skip days.

02 | The 30-Day Program Overview

Phase	Days	Focus	Tags
Foundation	1 – 7	Build habits, baselines, form	STR, HIT, CRF, HOM, NUT, MND
Build	8 – 14	Increase volume & intensity	STR, HIT, CRF, NUT, MND
Intensify	15 – 22	Push limits, compound movements	STR, HIT, CRF, NUT, MND
Peak	23 – 30	Max performance, lifestyle lock-in	ALL

■■ Tag Legend

STR = Strength | HIT = HIIT Cardio | CRF = Core & Flexibility | HOM = Home Setup | NUT = Nutrition | MND = Mindset & Recovery

03 | Today's Daily Action — Baseline Measurements

Before you start training you must know your starting point. Measurements give you objective data so you can track real progress — not just how you feel, but what actually changed.

Measurement	How to Measure	Your Value	Date
Body Weight (kg)	Morning, after toilet, before food	_____	_____
Chest (cm)	Fullest part, arms relaxed	_____	_____
Waist (cm)	At navel / narrowest part	_____	_____
Hips (cm)	Widest part of hips & glutes	_____	_____
Left Bicep (cm)	Flexed, at peak of muscle	_____	_____
Right Bicep (cm)	Flexed, at peak of muscle	_____	_____

Left Thigh (cm)	Mid-thigh, standing relaxed	_____	_____
Right Thigh (cm)	Mid-thigh, standing relaxed	_____	_____

Also take 3 photos: front, side, back. Store them privately — compare at Day 15 and Day 30.

■■ TIP — Best Time to Measure

Always measure at the same time of day (morning is best). Weight can fluctuate 1–2 kg daily from water and food — that is normal. What matters is the trend over 30 days, not daily changes.

04 | Day 1 Workout — Foundation Strength Circuit

Goal: Assess your baseline fitness, not push to failure. Perform each movement with control and note how many reps you complete with good form. **Equipment:** None. **Time:** 20–25 minutes.

#	Exercise	Sets	Reps / Time	Rest	Your Reps
1	Jumping Jacks	2	30 seconds	15 sec	___
2	Bodyweight Squat	3	12–15 reps	30 sec	___
3	Push-Up (any variation)	3	8–12 reps	30 sec	___
4	Reverse Lunge (each leg)	2	10 reps	30 sec	___
5	Plank Hold	2	20–30 sec	20 sec	___
6	Glute Bridge	3	12 reps	20 sec	___
7	Mountain Climbers	2	20 seconds	15 sec	___
8	Quad Stretch (each leg)	1	30 sec/leg	—	—

■ INFO — Modify, Don't Skip

Cannot do a push-up? Do it on your knees. Cannot hold a plank 30 sec? Hold 10 sec, rest, repeat. Modification is strength, not weakness. The goal today is to START and record a baseline.

05 | AYE Fit Hub Core Principles

Principle	What It Means for You
Progressive Overload	Each week: more reps, less rest, or harder variation
Consistency > Intensity	Showing up daily at 70% beats one perfect week then quitting
Nutrition is 70%	You cannot out-train a poor diet. Lessons 5, 12, 19 cover this
Recovery is Training	Muscles grow during rest. Day 7 and Day 14 are active recovery
Track Everything	What gets measured gets managed. Use the log tables in each PDF

06 | Day 1 Self-Check Question

Write your answer before moving to Day 2. Reflection is part of the training.

"What is the ONE habit that has held you back from fitness before — and what specific change will you make in the next 30 days?"

Your answer:

Next up — Day 2:
 HIIT 101 — The Science of Fat Burning in 20 Minutes
