Home Workout Setup

No Equipment, No Excuses

Day 4 of 30 | Home Training

Awet G. Nway

Mechanical Engineer & Fitness Coach

- Space & equipment guide
- Exercise substitution table
- Full bodyweight workout

01 | Why Home Training Works

The gym is a tool, not a requirement. Elite calisthenics athletes build extraordinary strength using nothing but their bodyweight and gravity. The real barrier to fitness is never equipment — it is consistency, and consistency is easier when the "gym" is your bedroom floor.

Over the next 30 days every workout in this program can be done in a space the size of a yoga mat (approximately 2m × 0.6m). No weights, no machines, no membership. What you need is a plan — and that is exactly what this PDF gives you.

■ INFO — Bodyweight Is Not "Easy"

A one-arm push-up requires more strength than most gym-goers ever develop. Bodyweight training scales with you: as you get stronger, the progressions get harder. There is no ceiling.

02 | Your Home Training Space Checklist

Item	Required?	Notes
Clear floor space 2m×1m	YES	Move furniture if needed — this is non-negotiable
Non-slip surface / mat	Recommended	Prevents slipping during planks and lunges
Sturdy chair or low table	Optional	Used for incline push-ups, step-ups, tricep dips
Resistance bands	Optional	Cheap upgrade — adds variety from Week 2 onward
Pull-up bar (door frame)	Optional	Unlocks back training. ~\$15–30 investment
Water bottle	YES	Hydration is non-negotiable
Phone / timer	YES	For work:rest intervals
Notebook or PDF log	YES	Track every session — what gets measured gets improved

03 | Exercise Substitution Table

If you cannot perform an exercise, use the substitution. Never skip a muscle group — modify instead.

Standard Exercise	Easier Substitute	Harder Progression
Push-Up	Knee Push-Up / Wall Push-Up	Archer Push-Up / Diamond Push-Up
Squat	Chair-Assisted Squat	Jump Squat / Pistol Squat (1 leg)
Lunge	Reverse Lunge (more stable)	Walking Lunge / Jump Lunge
Plank (forearm)	Plank on knees	Plank with shoulder taps
Burpee	Step-back Burpee (no jump)	Burpee + Push-Up
Mountain Climbers	Slow Mountain Climbers	Explosive MC / Cross-body MC
Hip Thrust / Bridge	Glute Bridge (floor)	Single-Leg Hip Thrust on chair
Dead Bug	Dead Bug (arms only)	Dead Bug + resistance band

04 | Day 4 Workout — Full-Body Home Circuit

Format: 40 sec work / 20 sec rest | Rounds: 3 | Equipment: None (chair optional) | Time: ~25 minutes

WARM-UP (4 min)

Exercise	Duration	Notes
March in place	60 sec	Exaggerate arm swing
Hip circles (each direction)	30 sec	Hands on hips, slow circles
Shoulder rolls	30 sec	Forward then backward
World's greatest stretch	60 sec	Alternate sides, 6 reps each
Jumping jacks (easy pace)	60 sec	Controlled, just elevate heart rate

MAIN CIRCUIT — 3 Rounds (40 sec work / 20 sec rest)

#	Exercise	Target Muscles	Substitute	Reps/Score
1	Push-Up	Chest, triceps, core	Knee push-up	___
2	Squat	Quads, glutes	Chair squat	___
3	Mountain Climbers	Core, shoulders, cardio	Slow MC	___
4	Reverse Lunge	Quads, glutes, balance	Step back only	___
5	Tricep Dip (on chair)	Triceps, shoulders	Narrow push-up	___
6	Glute Bridge	Glutes, hamstrings	Standard bridge	___
7	Plank to Down-Dog	Full body, shoulders	Forearm plank hold	___
8	Squat Jump	Legs, cardio, power	Bodyweight squat	___

■ INFO — 40/20 vs 30/30

Today uses 40 sec work / 20 sec rest (harder ratio than Day 2). You have less recovery time, so pick a pace you can sustain for the full 40 seconds. Dropping to 30/30 is fine for your first attempt — progressively tighten the ratio.

■ TIP — Log Every Round

Write your reps or a 1–10 effort score in the Reps/Score column for each round. After 30 days you will look back at these numbers and be amazed at how far you have come.

05 | Home Training Rules & Excuses Answered

Common Excuse	The Reality
"I don't have space"	You need 2m × 1m. Clear it. Move the coffee table.

"I don't have equipment"	80% of this program needs zero equipment. Your bodyweight is enough.
"I get distracted at home"	Schedule a fixed time. Put it in your calendar like a meeting.
"It's not as good as a gym"	Progressive bodyweight training builds the same muscle. Consistency beats location.
"I'll start when I feel ready"	You will never "feel ready." Start now, feel ready later.
"I missed a day"	Miss one day → do not miss two. Restart the next morning, no self-punishment.

06 | Weekly Training Template — Foundation Phase

Use this structure for Days 1–7. Adapt as your fitness grows.

Day	Type	Focus	Time
1	Strength STR	Foundation circuit (Day 1)	20–25 min
2	HIIT HIT	20-min fat burner (Day 2)	20 min
3	Core CRF	Core foundation (Day 3)	20–25 min
4	Home HOM	Full-body home circuit (today)	25 min
5	Nutrition NUT	No workout — nutrition lesson	10 min read
6	Mindset MND	Mindset lesson + light walk	20 min
7	Recovery MND	Active rest — stretch & walk	15 min

07 | Day 4 Self-Check Question

Answer before moving to Day 5.

"Is your home training space set up and ready to use every day — or is there still something in the way (physically or mentally)? What will you do today to remove that obstacle?"

Your answer:

Next up — Day 5:
Nutrition Basics — Macros Made Simple
