Interface and Navigation

Master Every Panel, Tool, and Shortcut in Coohom

Lesson 02 of 30 | Coohom Interior Design Program

Awet G. Nway

Founder, AYE Tech Hub | Interior Design & BIM Specialist

- The 6 interface zones and what each one does
- Left panel: every design tool and element type explained
- Right panel: properties, materials, and object settings
- 3D navigation: orbit, pan, zoom, fly-through and VR mode
- 20 essential keyboard shortcuts to work twice as fast

The Coohom Interface — 6 Zones to Know

Before you can design anything in Coohom, you need to know **exactly where everything is**. The Coohom interface looks clean and simple — but it is packed with tools spread across six distinct zones. Spend 10 minutes on this lesson and you will navigate confidently from day one.

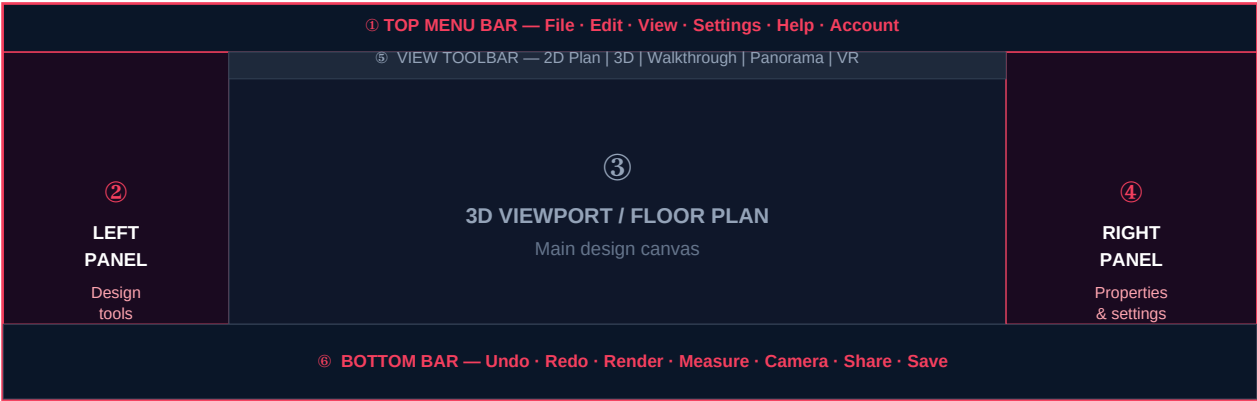

Figure 1 — Coohom Interface Layout: 6 Zones

Zone	Location	What It Contains	Most Used For
① Top Menu Bar	Very top	File (new/open/save), Edit, View, Render, Help, account settings	Saving projects, accessing settings, switching workspaces
② Left Panel	Left side	Design tools: Room, Wall, Floor, Ceiling, Door, Window, Furniture, Decoration, Plant, Custom model upload	Every design action starts here — select a tool then click in viewport
③ 3D Viewport	Centre (largest area)	Main design canvas — shows either 2D floor plan or 3D view depending on mode	All drawing, placing, moving and editing happens here
④ Right Panel	Right side	Object properties: position (XYZ), size, rotation, material, colour, finish, lighting settings	Fine-tuning selected objects — exact dimensions and material settings
⑤ View Toolbar	Top of viewport	2D / 3D / Walkthrough / Panorama mode switcher; perspective controls	Switching between floor plan and 3D view while designing
⑥ Bottom Bar	Very bottom	Undo, Redo, Render, Measure, Camera angle, Share link, Save	Saving work, switching camera position, triggering renders

First-time setup tip: When you open Coohom for the first time, go to Settings (top menu) and set your preferred unit system (Metric: mm or cm, or Imperial: inches/feet). Also enable Grid Snap — it makes wall drawing and furniture placement much more precise. You can toggle the grid with G.

Left Panel — Your Design Toolbox

The left panel is where every design action begins. Each icon represents a category of design tool. Click an icon to expand its sub-tools, then click in the viewport to use them.

Left Panel Icon	Category	Tools Inside	When to Use
Room / House icon	Room Creation	Draw room outline, set room dimensions, room template library	Starting a new floor plan from scratch
Wall icon	Wall Tools	Draw straight wall, curved wall, draw from external outline, wall height/thickness settings	Modifying existing walls or adding partition walls
Floor/Ceiling icons	Surface Tools	Floor material, ceiling height, add feature ceiling, sunken floor	Changing floor finishes and ceiling treatments
Door/Window icons	Openings	100+ door styles, 200+ window styles; sliding/bifold/French doors	Adding and replacing doors and windows anywhere
Sofa/Furniture icon	Furniture Library	10M+ furniture items: sofas, beds, tables, chairs, kitchen, bathroom	The most-used panel — search, filter by style, brand, or category
Lamp icon	Lighting	Ceiling lights, floor lamps, table lamps, strip lighting, spotlights	Adding and positioning all artificial light sources
Plant/Decor icon	Decorations	Plants, artwork, cushions, rugs, books, accessories, wall art	Final styling layer — bringing life and personality to the design
Upload icon	Custom Models	Upload OBJ/FBX/3DS files; import client's specific furniture	Adding items not in the library or client-specified products

Right Panel — Properties and Fine-Tuning

Right Panel Section	What You Can Control
Position (X, Y, Z)	Exact placement of selected object. X = left/right from origin. Y = forward/back. Z = height from floor. All in mm/cm.
Size (W, D, H)	Width, depth and height of selected furniture item. Change to resize — or lock proportions to scale uniformly.
Rotation	Rotate selected object in 1° increments. Click-drag in viewport for freeform rotation.
Material / Finish	Change the material applied to selected surface or object. Opens the material library filtered to compatible materials.
Colour	Change colour of fabrics, wood finishes, painted surfaces. Supports HEX codes, RGB sliders, or colour palette picker.
Lighting (for light objects)	Adjust brightness (lux), colour temperature (2700K–6500K), beam angle.
Layer / Visibility	Control whether object is visible in render; lock to prevent accidental moves.

Speed tip: You can select multiple furniture items by holding **Shift** and clicking each one. The right panel then shows common properties you can edit for the whole group at once — useful for changing all chairs in a dining set to the same material.

3D Navigation and View Modes

Mastering 3D navigation is the single most important skill for working efficiently in Coohom. Designers who struggle with navigation spend twice as long on every project. Spend 15 minutes practising these controls until they are automatic.

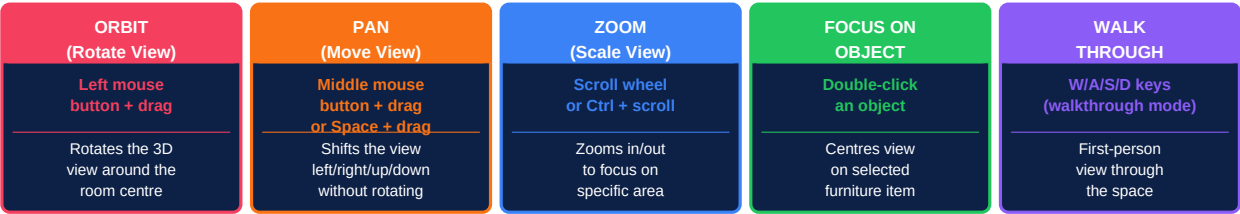

Figure 2 — 3D Navigation Controls in Coohom

Figure 3 — Coohom View Modes: 2D Plan / 3D / Walkthrough / Panorama

Essential Keyboard Shortcuts

Shortcut	Action	Shortcut	Action
Ctrl + Z	Undo last action	Ctrl + Y	Redo
Ctrl + S	Save project	Ctrl + D	Duplicate selected object
Delete	Delete selected object	Escape	Deselect / cancel current tool
F1	Switch to 2D floor plan	F2	Switch to 3D perspective
F3	Walkthrough mode	F4	360° panorama mode
G	Toggle grid snap on/off	R	Rotate selected object 90°
M	Measurement tool	H	Hide selected object
Arrow keys	Move object precisely	Shift+drag	Constrain movement to axis
Ctrl + A	Select all objects	Ctrl + G	Group selected objects
Mouse scroll	Zoom in/out	Space + drag	Pan the view

Common Mistake	What Happens	Fix
Working only in 3D view	Hard to place walls and doors precisely; inaccurate dimensions	Always draw floor plan in 2D view (F1); switch to 3D (F2) to check results
Not saving regularly	Browser crash or accidental tab close loses work	Ctrl+S every 10 minutes. Enable auto-save in Settings.
Moving objects without checking measurements	Furniture looks right in 3D but dimensions are wrong for the space	Click object → right panel → confirm XYZ position and W/D/H match spec
Rendering from wrong camera angle	Render does not show the best view of the design	Use walkthrough mode (F3) to find ideal camera position, then Render
Using wrong unit system	Room drawn at wrong scale; furniture looks oversized or tiny	Settings → Units → confirm Metric (mm) or Imperial before any drawing

What comes next — COHOOM-003: Space Planning Basics — how to plan a room layout for function and flow, minimum clearance standards for furniture placement, and the principles of good interior space planning before you place a single item.
