EMOM & AMRAP

Train Like an Athlete

Every Minute On the Minute · As Many Rounds As Possible

Day 15 of 30 | HIT Training | AYE Fit Hub

Awet G. Nway

Founder, AYE Fit Hub | Fitness Coach & Performance Trainer

- EMOM explained — the minute-by-minute format that builds elite fitness
- AMRAP explained — how max-effort time caps transform your work capacity
- EMOM vs AMRAP vs traditional sets — when to use each format
- 20-minute EMOM workout you can do today (bodyweight + minimal equipment)
- 15-minute AMRAP workout with scoring system to track your progress weekly

EMOM — Every Minute On the Minute

EMOM is one of the most elegant training formats ever invented. At the start of each minute, you perform a set number of reps. The time left in that minute is your rest. **The faster you complete the reps, the more rest you get.** This creates a self-regulating system — as you get fitter, you finish faster and get more recovery. Athletes, CrossFitters, and elite coaches use EMOM because it builds both strength AND conditioning simultaneously.

EMOM — Every Minute On the Minute (6-Minute Example at 40s work / 20s rest)

Figure 1 — EMOM Structure: Work fills the minute, rest fills the remainder. New minute = new set.

EMOM Rule	How It Works
Start on the minute	When the clock hits 0:00, 1:00, 2:00 etc. — you begin your reps immediately. Do NOT wait for a timer beep — watch the clock yourself.
Complete your reps quickly	Your goal is to finish the prescribed reps before the minute ends. If you finish at 0:35, you have 25 seconds to rest before the next minute starts.
Rest is earned, not given	The faster you move, the more rest you earn. This motivates efficient, purposeful movement rather than lazy pacing.
If you cannot finish in time	If the reps are too many or the weight too heavy and you run out of time — that is your signal: reduce reps or weight for next set. EMOM automatically shows you your current limits.
Duration	Typical EMOM: 10-20 minutes. Each minute is one working set. A 20-minute EMOM = 20 sets of work with built-in rest. Alternating EMOM: odd minutes = movement A, even minutes = movement B.

EMOM Intensity Level	Rep Target Rule	Example
Easy / Skill Focus	Reps take 20-25s of the 60s minute. ~35-40s rest.	EMOM 10: 5 pull-ups each minute — perfect form, plenty of rest
Moderate / Conditioning	Reps take 35-40s. ~20-25s rest.	EMOM 15: 10 push-ups + 8 jump squats each minute
Hard / Athletic	Reps take 45-50s. Only 10-15s rest.	EMOM 12: 12 burpees each minute — survival mode by minute 8
Alternating (2-movement)	Odd minutes: movement A. Even minutes: movement B. Different muscles.	EMOM 20: Odd = 15 push-ups. Even = 20 air squats. 10 sets each.

EMOM pro tip — "EMOM until failure" test: Set a rep target you think you can hit. Keep going until you cannot complete the reps within the minute. Your score = the number of complete minutes you lasted. Repeat the same test monthly — more minutes = measurable improvement in work capacity.

AMRAP — As Many Rounds As Possible

AMRAP is pure performance testing packaged as a workout. You set a timer, define a movement circuit, and go as hard as you can until time is up — completing as many full rounds (and partial reps) as possible. **Your score is your rounds + extra reps.** The same AMRAP done weekly shows your exact fitness progression in numbers.

YOUR AMRAP SCORE	
Week 1:	4 rounds + 3 reps
Week 2:	5 rounds + 1 rep
Week 3:	5 rounds + 8 reps
Week 4:	6 rounds + 2 reps
More rounds each week = measurable progress!	

Figure 2 — AMRAP: Clock runs, you keep going

AMRAP Rule	How It Works
Set the clock and go	Start the timer. Move through the circuit continuously. Complete all reps of each movement before moving to the next in the circuit.
Count full rounds + extra reps	Score = full rounds completed + any partial reps on the last incomplete round. Example: 4 rounds + 7 reps means you finished 4 full rounds and got 7 reps into round 5 when time ran out.
Pace strategy matters	Going too hard in the first 3 minutes → you crash and slow down drastically. Better: start at 80% effort, maintain throughout. "Pace yourself or the AMRAP will pace you."
Rest when needed — briefly	You can rest during an AMRAP but the clock keeps running. Short intentional rests (5-10 seconds) when form breaks down beat grinding ugly reps that cause injury.
Repeat the same AMRAP weekly	AMRAP becomes a fitness test when repeated. Beat your previous score by even one rep — you improved. This is why athletes use AMRAPs: cold, honest, objective progress tracking.

Figure 3 — Training Format Comparison: Traditional Sets vs EMOM vs AMRAP

TRADITIONAL SETS	EMOM	AMRAP
3 sets × 10 reps Fixed rest 90s between sets	X reps per minute Rest = time left in each minute	Max rounds/reps in time cap No prescribed rest
- Predictable structure - Great for strength	- Built-in rest timing - Efficient — no wasted time	- Maximum intensity - Measurable progress

EMOM vs AMRAP — when to use each: Use EMOM when you want to practice a skill with controlled volume and built-in rest (great for pull-ups, double-unders, barbell technique). Use AMRAP when you want to test fitness, push mental limits, or create a measurable benchmark to track over weeks. Use both in the same week for complete athletic development.

Today's Workouts — Day 15 Training

You have two options today. Complete one or both depending on your time and energy level. Both are bodyweight-friendly. Record your scores — you will repeat these in two weeks to measure progress.

WORKOUT A — 20-Minute Alternating EMOM

Minute	Movement	Reps	Coaching Cue
ODD (1,3,5...19)	Push-Up to Shoulder Tap	10 reps (5 each side)	Hips still — no rotating. Lock your core like a plank.
EVEN (2,4,6...20)	Jump Squat (or Air Squat)	15 reps	Land softly — knees track over toes. Squat to parallel.

Phase	Duration	Details
Warm-up	3 min before	Arm circles × 20, leg swings × 10 each, jumping jacks × 30, hip circles × 10
EMOM	20 minutes	10 rounds of push-up shoulder taps (odd) + 10 rounds of jump squats (even)
Cool-down	3 min after	Child's pose 30s, chest stretch 20s each side, quad stretch 20s each side
Score to record	—	Note which minutes you struggled to finish within the minute. Goal: finish every round comfortably by Week 4.

WORKOUT B — 15-Minute AMRAP (Benchmark)

Movement	Reps per Round	Modification
Burpee	5 reps	Step out burpee (no jump) — same core, lower impact
Air Squat	10 reps	Sit to chair, stand back up — full ROM priority
Push-Up	10 reps	Knees on ground — maintain straight line head to knee
Mountain Climber	20 reps (10 each leg)	Slow controlled — avoid hip sway

Week	Your Score	Goal	Notes
Week 3 (Today)	_____ rounds + _____ reps	4+ rounds	
Week 5 (repeat)	_____ rounds + _____ reps	5+ rounds	
Week 7 (repeat)	_____ rounds + _____ reps	6+ rounds	
Week 9 (repeat)	_____ rounds + _____ reps	7+ rounds	

Common EMOM / AMRAP Mistake	Why It Hurts You	Fix
Going too heavy or too many reps in the first round	You burn out by minute 5-6 and spend the rest of the session at a fraction of your capacity	Start conservative — 70% of what you think you can do. Better to finish strong than crawl to the end.
Not tracking your score	AMRAP is meaningless if you don't record the result. You have no baseline and cannot measure progress.	Keep a notebook or phone note. Date + score + notes. 1 minute to record = weeks of motivation.
Skipping the warm-up	Cold muscles in a high-intensity EMOM = injury risk. Burpee at 100% with a cold hip flexor = pulled muscle.	3 minutes minimum: joint circles, easy cardio, 2-3 practice reps of each movement at low effort.

Sacrificing form for reps	One bad rep can cause injury that ends your training for weeks. A poor squat, push-up, or landing pattern adds up fast.	In AMRAP, form comes first — always. Slow down, reset, do it right. Quality rounds, not sloppy rounds.
---------------------------	---	--

Tomorrow — Day 16: Lower Body Flexibility — Hips, Hamstrings, and IT Band. After today's leg-heavy training, tomorrow's session is active recovery: targeted mobility work for the muscles you just trained. Don't skip it — flexibility sessions between hard days accelerate recovery and prevent the tightness that limits performance.
